PROPOSED KTRK TEMPORARY TOWER – LATEST NEWS UPDATES

Planned temporary tower operations will run during KTRK's 3 month long peak-summer air traffic season, from mid-June through mid-September 2017. The following is some of the latest news:

- The tower will operate 7 days per week from 7 am - 9 pm.
- Tower influence will extend to 2,500' AGL within a 5 mile radius of the airport.
- New tower and ground control frequencies will be in use.
- UNICOM frequency 122.8 MHz will still be used for after-hours flight operations, ramp movement and general aviation information and services.
- Airspace will remain Class E in 2017. If the tower program is continued, we hope to have FAA Class D designated airspace by summer 2018.
- The physical tower dimensions will be approximately 25' wide x 30' long x 36' high.
- The tower will be staffed and operated by Mid-West Air Traffic Control Services, Inc.

The main purpose of the temporary tower will be to provide a safe aviation environment at KTRK, especially during heavy use times. Anticipated additional benefits will be reduced traffic pattern transit times and hopefully reductions in neighborhood overflights and annoyance. Stay up to date with the latest tower news at:
