## **PROPOSAL FOR ADSB INSTALLATION ON N1968F**

Hardy, the following is the proposal from Sierra Aero:

TTAD pays for an ADSB unit that Sierra Aero installs in trainer/rental aircraft N1968F. Sierra Aero will pay for the installation cost. The Garmin ADSB unit, GDL 88 Diversity with WAAS, is \$5,995.00. N1968F is currently equipped with the Garmin 530, which will integrate well with the ADSB unit.

Sierra Aero will give TTAD 35 hrs of flight time in N1968F, which can be used for collecting data for the flight tracking system or a proposed ADSB tower, for BFR's for local pilots (flight instructor price not included and please note that any instructor performing training in our aircraft has to be on Sierra Aero's insurance as a named CFI), tours of the Fly Quite Program, or any other occasions when TTAD would benefit from using the aircraft (staff that would fly would be checked out with Jeff first).

This is just a first draft of a proposal, so if you can think of anything that would need to be changed, let me know. I think it would be a great partnership for both TTAD and Sierra Aero; ADSB will be mandated soon and this is a way for all of us to get a better understanding and see first-hand what the benefits will be.

Regards,

*Jessica Fay*
