Dave,

It was nice speaking with you on the phone! As discussed, I've included information on the Engine Management (flow control) System that shows the reduction in emissions. There is also general information attached which shows diesel fuel savings.

Pricing for 5,000 Gallon Rampmaster to include:

Single Overwing

Scully

Locking Storage Box

Sump Tank Emptying to Pump Inlet

Prist

Electronic Level Gauge

Roughly \$299,000.

Tax 22,425 Freight \$ 15,900 = \$ 337,325

There is also a brief video listed below demonstrating how the system works. Please let me know if you need anything else in the meantime and I will look forward to hearing from you!
