Hello,

I am writing as a local Glenshire resident in support of the Airport Board's dedication to the local Truckee / Tahoe community. With such a small percentage of the local resident population actually using the aviation facilities of the airport I commend the airport board's historical and continued support for local programming that is relevant to a wider audience who funds a significant portion of the airport's operating budget.

If the aviation community is requesting greater access to hangars, I strongly believe these should be funded by the individuals who are directly benefiting from those hangars. Historical studies have demonstrated how the TTAD charges below market rates for hangars and fuel. Why should the broader community have to fund an expansion of hangars which will ultimately drive additional noise and environmental pollution to our region.

Best regards
Doug Grapski

Dear Airport Board,

As a resident and taxpayer of the Truckee Tahoe Airport District, I strongly support the TTAD's efforts to support local wildfire mitigation. These are exactly the type of community benefit initiatives the airport should be focusing on.

Wildfire mitigation is a top policy concern for the Tahoe region. Mitigation efforts are critical for ensuring community safety, improving air quality, and addressing the insurance crisis.

I hope the Board moves quickly to finalize this community funding opportunity and would encourage the Board to redouble its efforts to focus airport budget priorities on community benefits.

Thank you for your leadership on this initiative!

Sincerely,

Nick Pappas, Truckee, CA

Truckee Tahoe Airport District Resident, Taxpayer, and Voter

Failing this, our community must find a path to reducing the airports public funding due to the lack of public benefit.

Sincerely, David Mack

Not sure this will reach the board in time, but I'm writing in support of Item 10 on the agenda to help with the community's wildfire prevention needs. Given the dangers of density altitude and the Truckee Airport's unfortunate history of crashes, the potential for a crash-induced wildfire is a very real one and it seems appropriate to direct district resources to mitigate this increasing danger.
