Item 4. Statewide Clean Aviation Initiative (SCAI)

CARB is exploring opportunities to address the need for statewide reductions of nitrogen oxides (NOx), a key precursor for ozone formation, and particulate matter (PM) to meet federal air quality standards and protect public health. Statewide aviation activities contributed 42 tons per day (tpd) of NOx emissions in 2022 and are projected to increase to 63 tpd by 2037. The aviation sector is the only mobile source category in California where emissions are expected to substantially increase in the future.

The linked document outlines draft concepts under consideration by the California Air Resources Board (CARB) as part of the Statewide Clean Aviation Initiative (SCAI). Draft Concepts – Submit Comments to aircraft@arb.ca.gov by March 2, 2026.

Potential List of Airports Within Scope of Draft Concepts, includes Truckee Tahoe Airport under Additional Airports Under Consideration to be Included in the Scope below.

Prioritizing Reducing Emissions from Airports Surrounded by Disadvantaged Communities (DACs). To achieve more emission benefits and reduce emissions faster to relieve the pollution

burden in DACs, CARB staff is considering developing more stringent requirements for airports where over 30% of the surrounding communities (within 3 miles) are DACs.
