TRUCKEE TAHOE AIRPORT

Fly Safe

Seminar Series

Power & Energy Management

Join us for our next Fly Safe seminar featuring Kevin Quinn, veteran backcountry and mountain flying instructor, and founder of STOL Drag Racing. In this presentation, Kevin will discuss Power & Energy Management, a practical approach to aircraft control that focuses on managing airspeed, altitude, descent rate, and aircraft energy to improve safety and precision during takeoffs, landings, and operations in challenging environments. The concepts are widely applicable to pilots of all experience levels and aircraft types. Whether you fly in the mountains, operate from short runways or simply want to sharpen your stick-and-rudder skills, this session will provide valuable techniques to help you become a safer, more proficient pilot.

About The Speaker

Kevin Quinn is a CFI, Warbird and Backcountry pilot and creator of the High Sierra Fly In. He has accumulated 9,500+ hours of flight time, much of it in demanding mountain and off-airport environments and has flown everything from Super Cubs, Skywagons, Stearmans, T-6's and the P-51 Mustang. Kevin is also the creator of STOL Drag which transformed short takeoff/land competition.
