PROPOSED KTRK TEMPORARY TOWER – LATEST NEWS UPDATES

Planned temporary tower operations will run during KTRK's 3 month long peak-summer air traffic season, from mid-June through mid-September 2017. The following is some of the latest news...

- The tower will operate 7 days per week from 7 am - 9 pm.
- Tower influence will extend to 2,500' AGL within a 5 mile radius of the airport.
- New tower and ground control frequencies will be in use.
- UNICOM frequency 122.8 MHz will still be used for afterhours flight operations, ramp movement, general aviation information and services.
- Airspace will remain Class E in 2017. If the tower program is continued, we hope to have FAA Class D designated airspace by summer 2018.
- The physical tower dimensions will be approximately 25' wide x 30' long x 36' high.
- The tower will be staffed and operated by Mid West Air Traffic Control Services, Inc.

The main purpose of the temporary tower will be to provide a safe aviation environment at KTRK, especially during heavy use times. Anticipated additional benefits will be reduced traffic pattern transit times and hopefully reductions in neighborhood overflights and annoyance.
